*Dendrocalyptis is a genus of fungus in the family Tricholomataceae of the order Agaricales. It is a monotypic genus, containing the single species Dendrocalyptis racemosa, commonly known as the branched Collybia or the branched shanklet. The somewhat rare species is found in the Northern Hemisphere, including the Pacific Northwest region of western North America, and Europe, where it is included on several Regional Red Lists. It usually grows on the decaying fruit bodies of other agarics - such as Lactarius and Russula - although the host mushrooms may be decaying to the point of being difficult to recognize.*

A beginner is a beginner. Learning how to write in adult lanes can actually be easier, especially if you have printed with a hand in lane, which means that your letters are already tilted as for lane script. To be brief? Connect the letters while you write. You can learn the style while you train to write in your hand. For adults using these lanes script sheets print the "two-up" pages so they can use the smaller character and less paper. It makes no sense to cross the largest calligraphy to learn the lane. It is the same for basic lane practice sheets for older children and high school students. Keep it short and sweet. 1. The alphabet in the aisle hello!
